

# Aluminum Marker Caddy Installation Instructions

Walltalkers' Aluminum Marker Caddy is available with either hook-and-loop or magnetic mounting options:

- Caddy Model No. AMC1 is supplied with pre-attached hook-and-loop. To install, establish the desired location of the caddy on the wall surface. Remove the strippable backing from the backside of the hook-and-loop exposing the adhesive. Carefully position and place the caddy against the wall surface where desired. Press firmly into the wall. Once adhered, the caddy's position can be slightly adjusted by decoupling and recoupling the hook-and-loop as necessary. Discard stripped backing.
- Caddy Model No. AMCM is supplied with pre-attached magnets for attachment to magnetic-receptive surfaces. To install, establish the desired location of the caddy on the surface. Remove the strippable backing from the magnets. Place the caddy against the magnetic-receptive surface where desired. Discard stripped backing.
