

UPSCALE VAGABOND II HANGING INSTRUCTIONS

The Sondra Alexander Upscale Vagabond II wallcovering product is based on natural leather strips woven in a diagonal basket weave pattern. Because each diamond created by the weave is slightly different, it is a non-reverse matched pattern with a large-scale repeat. This product has a vertical repeat of 32 inches and a horizontal repeat of 49.50 inches. Since the basket weave is difficult to match, it should not be wrapped around inside corners. Instead, a new plumb line should be established on each wall and the corner cut-in. One of the diamonds that is repeated on both sides of the web has been chosen as the match point. This particular diamond has a vertical drop of 5.75 inches between where it appears on each side of the web. To assist in aligning this diamond, arrows have been added to the embossing pattern. As the picture below shows, the strips should be applied to the wall with the **left strip overlapping the right strip**, and the arrows adjacent and pointing toward each other. When the seam is double-cut between the arrows, the excess material with the trim marks will be removed from each web.

Because this product has a unique match point, table trimming is not recommended as the Trim Arrows needed for matching will be lost.

(The outlined area on the picture above has been cut out to show the trim mark on the right strip, which would normally be hidden underneath the strip on the left).
