

9' Radius Feature Wall  
**Little Earth 1 & 2**  
EM 7800 & 7801  
Nickel Pearl finish

Specifying Earth Metal™ is a simple process. Follow the short form guidelines listed below. Complete architectural/CSI specifications and installation guidelines can be downloaded from our web site or contact the factory.

Item:	Gage 78 Earth Metal	General Comments
Design:	Enter specified design/name, i.e. EM 7800 Little Earth 1	1. Shop drawings/renderings, if required, are available from Gage 78. Hourly rates will apply.
Metal:	6063 Aluminum T5	2. Standard lead times are typically 6 weeks. Contact the factory for expedited production schedules.
Wall Thickness:	Refer to design matrix.	3. Quotations for standard products are provided within 24-48 hours of request.
Length:	Refer to finish matrix for maximum length determined by finishing process.	4. Earth Metal currently has 10 standard designs and 16 standard finishes. Custom finishes are a specialty of Gage 78. Please contact the factory for custom or specialty finishes.
Finish:	Enter name of finish per matrix, i.e. Honest Aluminum	
Specification:	Enter AAMA number per finish matrix, i.e. AAMA 2605	
System:	Earth Metal mechanical attachment

earth metal™ **78**  
DIMENSIONAL ARCHITECTURAL SURFACING

Earth Metal™ is a highly dimensional and extremely durable architectural surfacing appropriate for feature walls, ceilings, columns, elevator interiors, dividing walls and other innovative interior and exterior architectural applications.

Earth Metal products are made from 66% recycled aluminum (50% post consumer, 16% pre-consumer). Our raw material is produced in a mill less than 500 miles from our state-of-the-art production facilities in Wisconsin. Since aluminum is theoretically 100% recyclable, any of the scrap from our production process is returned to the mill for recycling.

Honest Aluminum finish

Earth Metal panels are 8" wide modules available in lengths up to 20 feet. The virtually seamless panel connections allow for an aesthetically pleasing flow. The standard mechanical attachment method to the properly prepared substrate makes for an economical and efficient installation.

Collaboration on custom designs and finishes is encouraged by Gage 78 subject to both the parameters of the project size/budget and the Earth Metal production process. Please contact the factory. Earth Metal will be adding new designs on a regular basis which can be accessed on our website.
